

# IPS Series

## Internet Power Switches

### Cable Keeper Installation Instructions (Slider Style Cable Keeper)

To install the Cable Keeper, proceed as follows:

1. First make certain that *both* of the IPS's two power cables are disconnected from the power source.
2. Use the flat head screws supplied with the Cable Keeper to attach the bottom plate to the underside of the IPS-800 unit as shown in Figure 1. When properly attached, the bottom plate will protrude about one inch beyond the edge of the IPS-800 unit.
3. Use the remaining screws supplied with the Cable Keeper to loosely attach the slider plate to the bottom plate as shown in Figure 1. Make certain that the slider plate moves freely, ensuring that it can be easily moved into position once the power cables are in place.
4. Connect the power cables to the power inlets. Check to make sure that both cables are firmly seated in the power inlet connectors.
5. Align the power cables with the two notches at the top of the slider plate, and then move the slider plate forward until both cables are held firmly in place.
6. Tighten the two screws that secure the slider plate to the bottom plate. Check to make certain that the cables are held firmly in place by the Cable Keeper.
