DSM-40-E

Dual Gigabit Ethernet Ports, Dual Power Supply

DSM Series console servers provide secure, reliable out-of-band access to console ports and aux ports on crucial network elements, allowing emergency access to mission critical device infrastructure.

When unresponsive network elements disrupt communication, DSM Series Console Servers provide fast, secure, OOB access to routers, switches, firewalls and other equipment. Create an SSHv2 connection to any device on your network via 10/100/1000 Ethernet, 4G LTE Cellular or PSTN dial-up, and then remotely tweak configuration parameters, view audit logs or implement troubleshooting functions to restore your network without the expenses, delays and hassles of a truck roll or service call.

The DSM's monitoring and alarm functions simplify remote network management by providing an automated response to high rack temperatures, failed pings and other signs of trouble. Monitoring and reviving network devices has never been easier!
